

Weeks 1–2: Planning & Setup

- Finalize requirements (use your proposal as guide).
 - Define database schema (Students, Staff, Appointments, Certificates, Notifications).
 - Assign tasks to team members (backend, frontend, testing, documentation).
 - Install tools: Python, Django, MySQL, GitHub/GitLab for version control.
-

Weeks 3–4: User Authentication & Verification

- Implement **Student registration/login** with school email + OTP verification.
 - Add **document upload** (COR / ID).
 - Build **Registrar approval flow** (approve/reject accounts).
 - Test database integration with MySQL.
-

Weeks 5–6: Appointment Scheduling Module

- Students can **view available schedules** and book an appointment.
 - Registrar staff can **approve/decline** appointments.
 - Store appointment data in database.
 - Add validation (no double booking, limits per day).
-

Weeks 7–8: Certificate Request Module

- Students can request certificates (Good Moral, Enrollment, etc.).
 - Categorization by **type, course, year level**.
 - Attach supporting documents (receipts, authorization).
 - Status tracking: Pending → Approved → Released.
-

Weeks 9–10: Staff Dashboard

- Registrar staff dashboard:
 - View/manage appointments.
 - Verify student details.
 - Update request status.

- Generate simple reports (e.g., number of requests per type).
-

Weeks 11–12: Notifications & Tracking

- Email notification system:
 - Confirmation of registration.
 - Appointment reminders.
 - Certificate release updates.
 - Student request tracking panel (view real-time status).
-

Weeks 13–14: Admin Panel & Security

- Admin can:
 - Manage users (students, staff).
 - View analytics (most requested certificates, busiest schedule times).
 - Oversee system activity logs.
 - Add security (password hashing, database backups, input validation).
-

Weeks 15–16: Testing, Debugging, and Documentation

- Run test cases (unit + integration).
- Fix bugs and polish UI.
- Prepare **user manual** (for students & staff).
- Finalize project report + presentation.
- Deploy on localhost or school server (if possible).
